

Solution brief

Assist for Records and Evidence Managers

Harness the latest AI technology to
eliminate time-intensive admin tasks

Real-time operations centers are under pressure

of a Records and Evidence Manager's time is spent on basic admin

hours are spent every day searching for data across multiple video sources

hours of manual work are required to redact a single hour of evidential video

The result

Your teams are overwhelmed, working overtime to keep up with the backlog

Assist saves time.
Time saves lives.

Introducing Assist for Records and Evidence Managers

Managing law enforcement records and evidence is a relentless exercise in micro-detail and repetitive data entry. Assist for Records and Evidence Managers can help, reducing hours of drudgery to mere minutes by automating clerical functions and enhancing policy compliance.

Review Assist allows you to process audio evidence quickly and efficiently: **Transcription** transforms calls, radio and video into searchable text, while **Translation** automatically renders speech into your chosen language. You can then use the natural language **Text Search** to extract vital keywords, and **Summarization** to highlight the important points.

Narrative Assist helps you to tell the complete story, with professional incident narratives built from multiple sources. **Narrative Builder** can create a first draft, while maintaining a full audit on human-and AI-created text. Built-in **Deficiency Detection** prompts for contradictions or missing information, while **Proofread and Polish** helps you deliver professional-quality reports with complete accountability.

Redaction Assist dramatically speeds up video processing. **Object Detection** identifies people, documents, license plates, screens and vehicles in every frame of the video, then **Video Redaction** allows you to obscure any of those objects, with **Audio Redaction** giving you control of the soundtrack. **Video Chapterization** breaks the incident into summarized, manageable segments, while **Transcription with Text Review** delivers natural language search of a highly-accurate incident transcript.

When analyzing the data, **Assist Chat** is your personal CJIS-compliant conversational assistant. You can interact with **knowledge bases** such as agency policies and procedures, and **databases** such as CAD, DEMS and RMS.

→ Unified Data

Eliminate data silos. Instantly view connected digital evidence, transcripts, and records in one place from the start, saving hours spent manually piecing together fragmented streams.

→ Accelerated Workflows

Automate time-draining administrative tasks. Drastically speed up data collection, video redaction, and incident narrative drafts to reduce backlogs and minimize overtime.

→ Built-In Compliance

Improve audit- and courtroom-readiness. Help ensure reports and files adhere to CJIS and standard operating procedures with automated, highly accurate outputs—always with a human in the loop.
