

Edge Node Companion App

Onboarding

Simplify your Edge Node deployments

Setting up and configuring the Edge Node for MOTOTRBO systems can be complex, but it doesn't have to be. The Edge Node Companion App simplifies the entire process, providing our partners with clear, step-by-step guidance. This app streamlines setup and deployment, helping you complete installations quickly and efficiently.

With the Edge Node Companion App, you can expect:

- **Guided instructions:** Follow intuitive, step-by-step directions that eliminate guesswork.
- **Streamlined setup:** Accelerate your deployment times with a simplified process.
- **Faster installations:** Empower your team to complete Edge Node configurations with ease.

Access the Edge Node Companion App:

Apple App Store:

1. Wizard Overview

These steps will need to be completed to configure your Edge Node. Click on each step within the wizard for detailed information regarding:

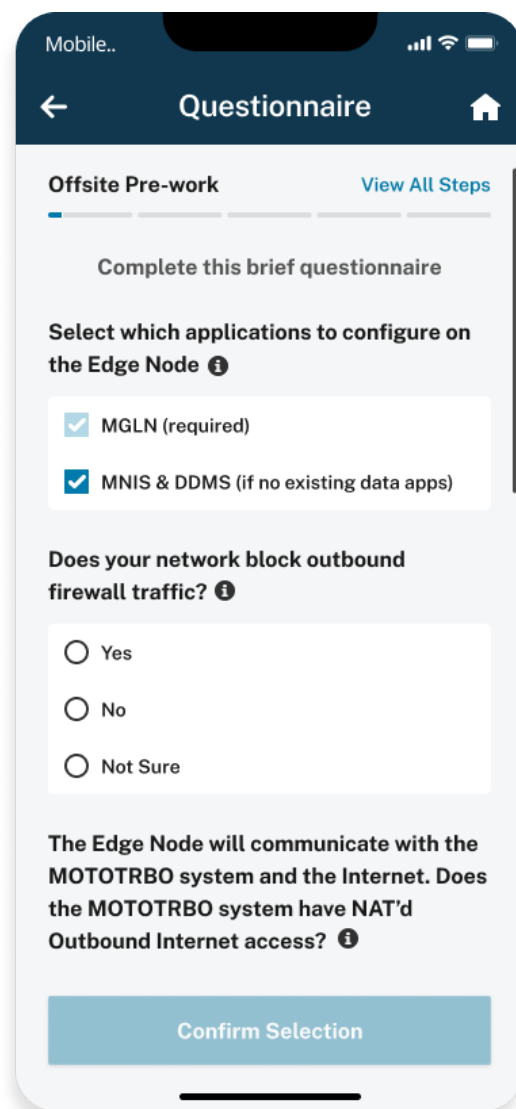

- **Location:** Where the step needs to be performed (e.g., on a specific server, a local machine).
- **What's Needed:** Any prerequisites, tools, or information required to complete the step.
- **Duration:** An estimated time for completing the step.

2. Necessary pre-work

The Edge Node Companion App's off-site pre-work starts by guiding you through essential remote setup steps.

You'll need to fill out a questionnaire where you'll select your system, desired applications, and network preferences. Please note that IT assistance may be required for certain inputs in the upcoming stages.

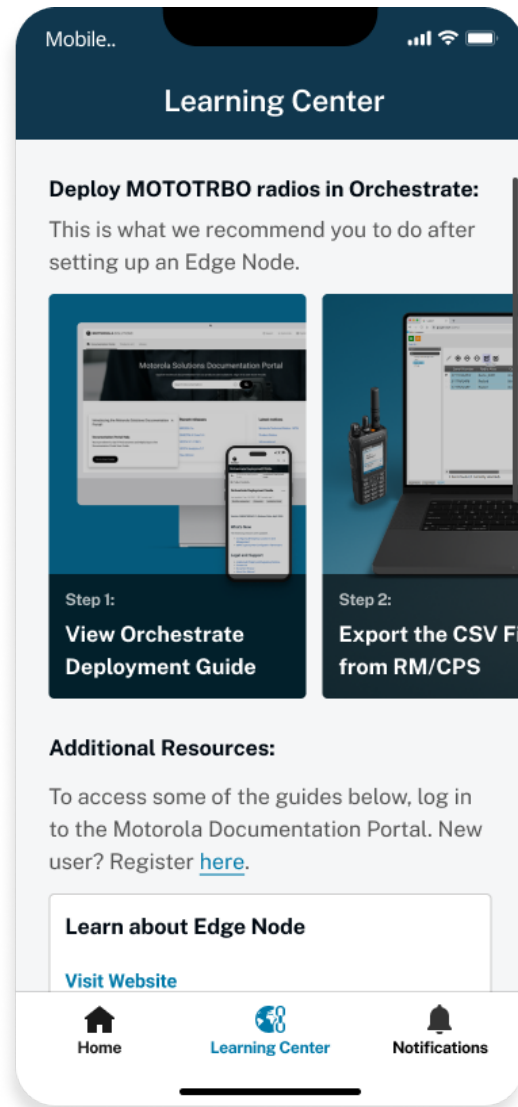

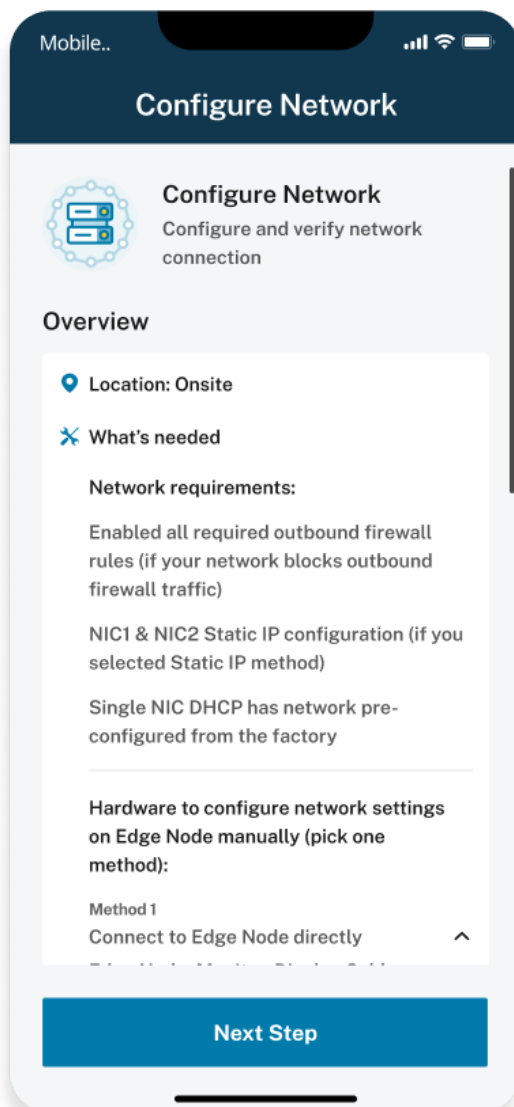

3. Onsite installation, configuration and verification

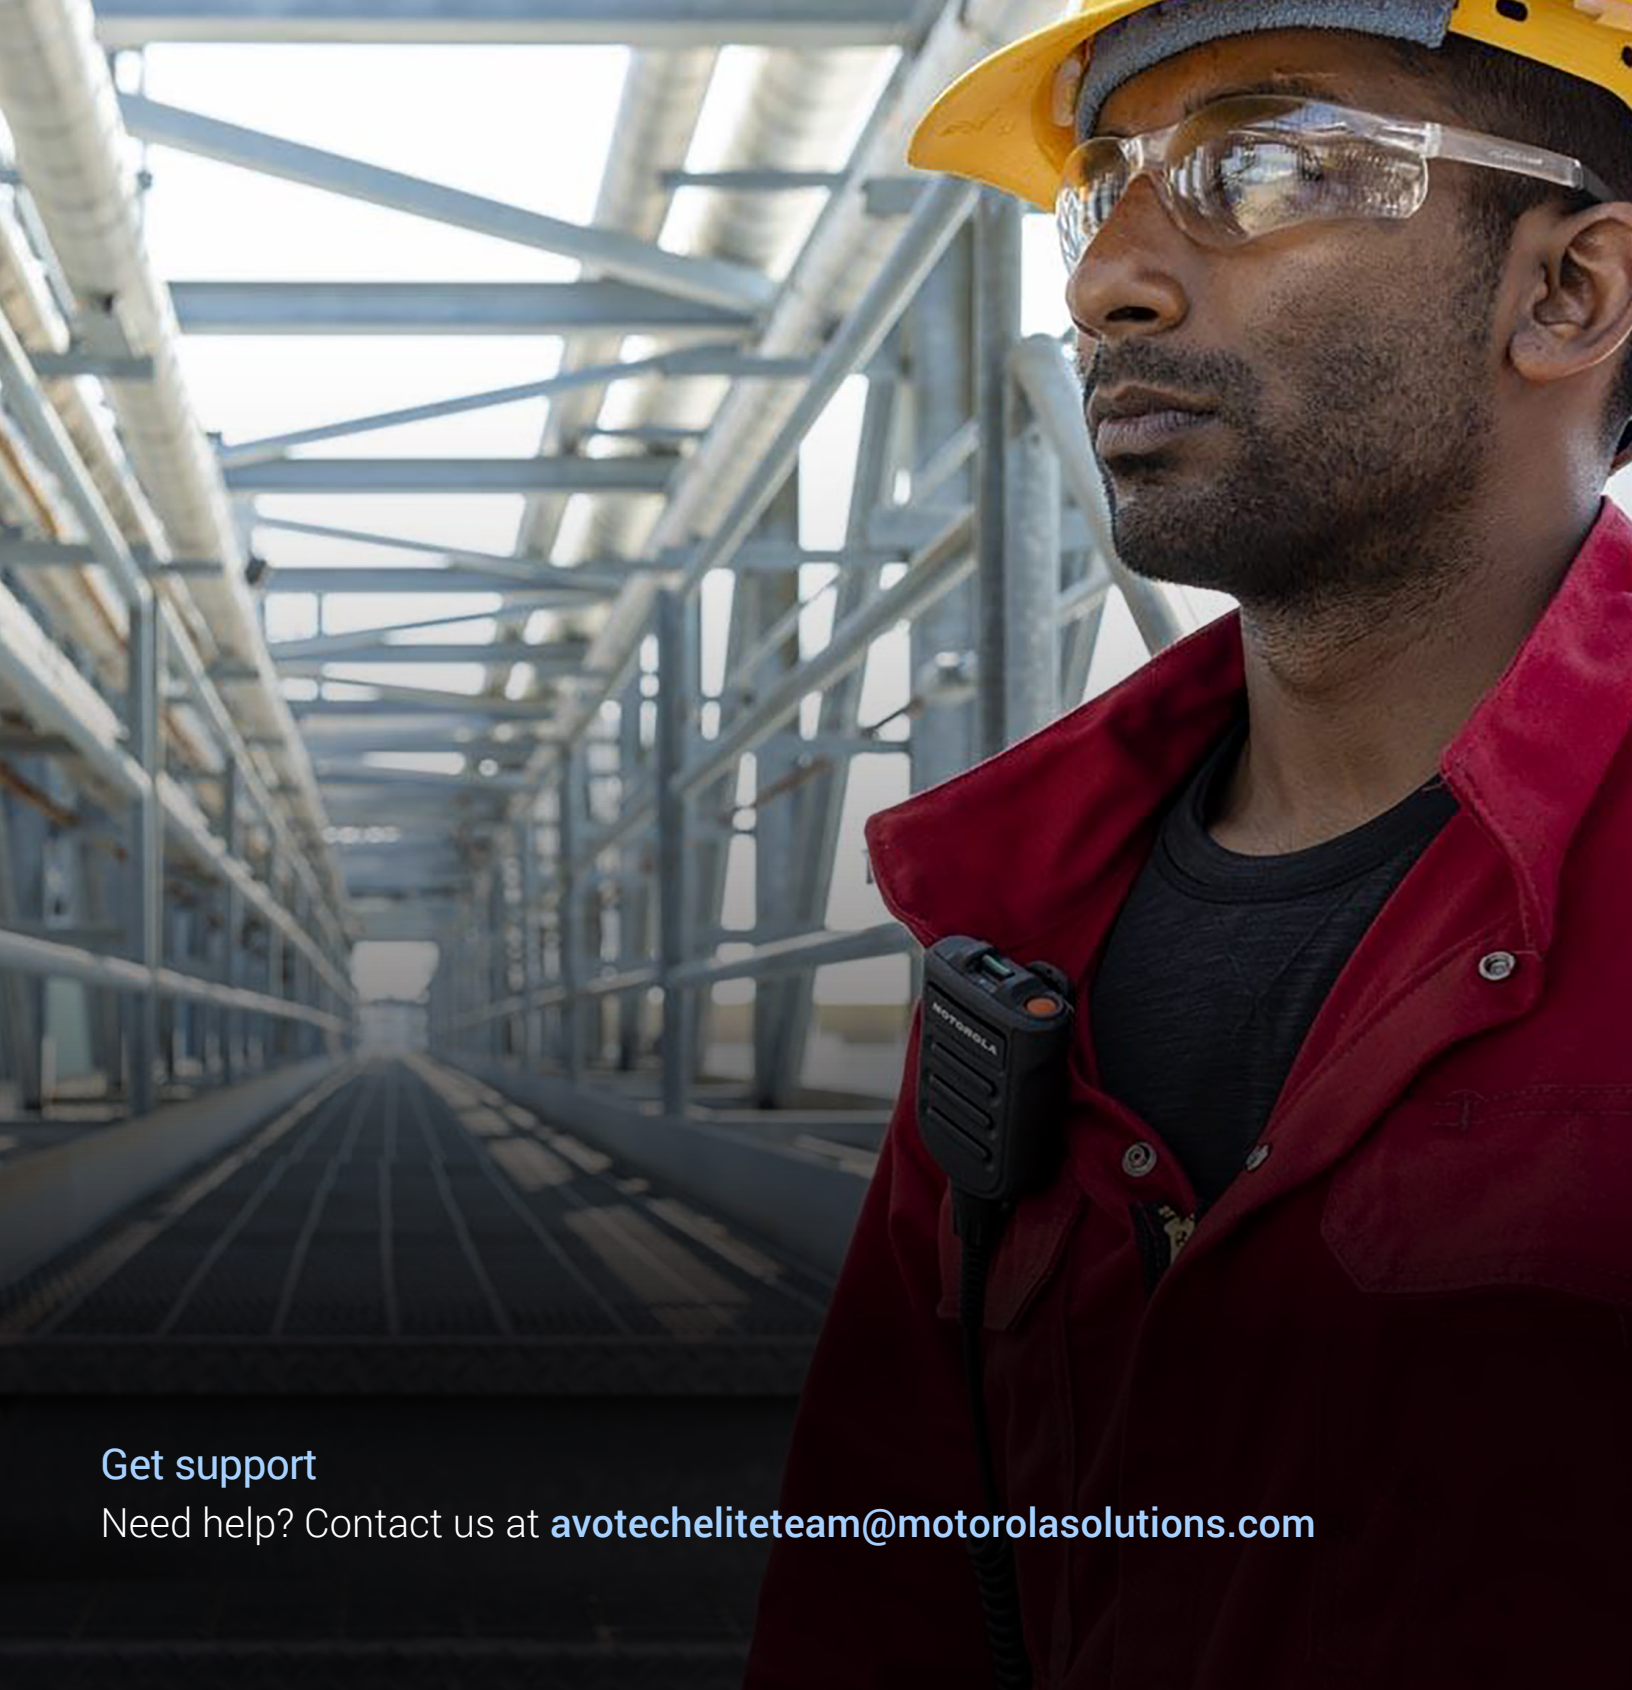

Onsite network configuration entails physically installing and powering on the Edge Node, then verifying network interface selections and inputting static configurations with provided instructions. This could take anywhere from a few hours to a few days depending on IT's response time.

The wizard's later stages involve installing software on the Edge Node, followed by configuring applications using pre-work selections, and finally verifying the configuration by checking application statuses and radio connectivity.

4. Review next steps in the Learning Center

Once the wizard is finished, check out the Learning Center for a recommended list of post-setup actions for Edge Nodes, complete with step-by-step instructions.
