

Protecting the path from “help” to “home”

K-12 Resilience

Closing the gaps in school safety

The reality of a school crisis

When an emergency occurs on a school campus, traditional safety tools focus almost entirely on the speed of the initial alert. However, an incident is rarely over when the alarm stops.

School administrators and safety teams are often left facing a critical timeline after the sirens fade; a period marked by fragmented communication, outdated paper rosters and disconnected systems. This operational blind spot creates dangerous vulnerabilities in communication, student accountability and multi-agency coordination when seconds matter most.

A continuous thread of protection

Motorola Solutions helps bridge these critical vulnerabilities with K-12 Resilience, a unified technology solution designed to support your safety mission through every minute of a crisis.

By seamlessly linking emergency alerts with real-time student accountability and structured family reunification, K-12 Resilience helps your school navigate an incident with clarity. This end-to-end solution removes the technical heavy lifting from your staff, providing a single source of truth that helps educators stop managing disconnected tools and focus entirely on what matters most: the children in their care.

The moment of impact

Motorola Solutions is a proud Mission Partner of The "I Love U Guys" Foundation.

Immediate alerts and local partnerships

The power of direct activation

Immediate response begins at the fingertips of your staff with the emergency panic button application and wearable devices. With a single press, school personnel can instantly initiate a call for help while simultaneously triggering internal security protocols across the entire campus.

Motorola Solutions is a proud mission partner of The "I Love U Guys" Foundation. The solution embeds recognized Standard Response Protocols (SRP) directly into the application, using established, familiar language like Hold, Secure, Lockdown, Exacuate, and Shelter to guide your staff through clear, pre-planned actions and replace panic with confident, organized execution.

Stronger response through local collaboration

A panic button alone cannot protect a school; true safety relies on a deeply integrated relationship with local public safety. While the panic button instantly initiates an emergency call, its ultimate strength depends on an active partnership with your local Public Safety Answering Point (PSAP) or 911 call center.

When school districts collaborate with local dispatchers to align systems, a panic activation does more than dial a number. It allows critical facility context and panic button data to be shared directly with dispatch, helping first responders arrive more informed, exactly where help is needed.

Command and control: The Resilience Platform

Total visibility when seconds matter

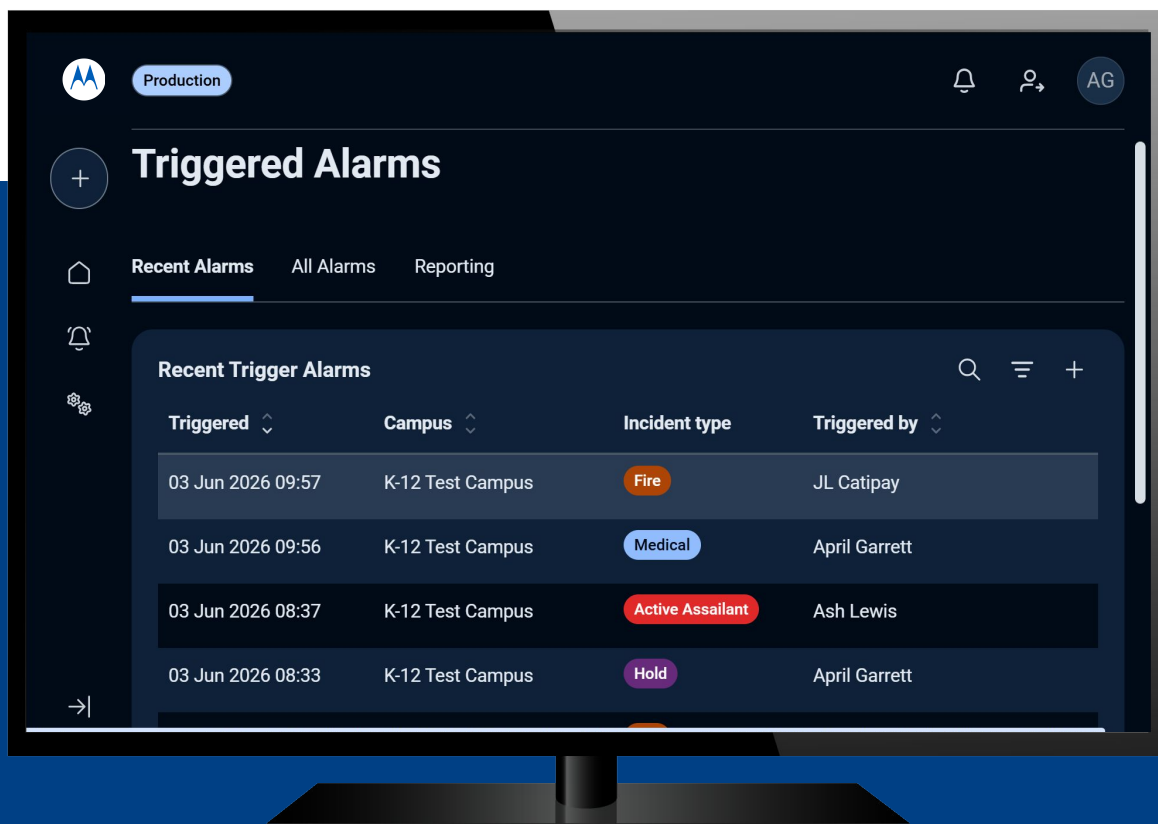

Behind every emergency activation is the Resilience Platform, the software that acts as the operational heartbeat of your school's response. The moment an alert is triggered, the platform bypasses traditional manual delays by automatically generating a digital incident log to provide leadership with instant context.

In a high-stress moment, the quality of information determines the speed and confidence of a response. For example, knowing that a "Mrs. Smith activated a panic button because a student is having a seizure in classroom 12", is a lot more helpful than simply knowing "an alarm is going off somewhere in the school." Rather than scrambling to find paper maps or managing separate message threads, administrators gain an immediate, high-level view of the campus status right from a single screen.

An end-to-end response

The Resilience Platform guides your leadership team through the lifecycle of an incident by allowing you to dynamically activate response plans, follow real-time progress and maintain a clear digital ledger of events.

Tailored, role-based dashboards help superintendents, principals and security directors see only the exact tools and information required for their specific duties, preventing data overload during high-stress scenarios. This clarity transforms how incidents are managed, providing a complete, documented timeline from the initial alarm to the final resolution.

Accountability you can trust: Smart rostering

Moving beyond the paper clipboard

In the frantic moments of a campus evacuation, relying on paper rosters or yesterday's attendance sheets introduces a dangerous margin for error.

K-12 Resilience eases this uncertainty through a comprehensive student data integration to Clever®. By directly syncing with your daily attendance records, K-12 Resilience helps keep emergency rosters accurate, dynamic and reflective of who actually came to school that morning.

Real-time headcounts

With smart student accountability, teachers no longer need to search for physical clipboards during an evacuation. Educators simply access digital rosters on their web-enabled devices to mark students safe, missing or injured in real time.

This data feeds directly into a total student headcount that is visible to leadership, allowing administrators to quickly identify who has been accounted for and deploy resources to locate missing individuals without delays or guesswork.

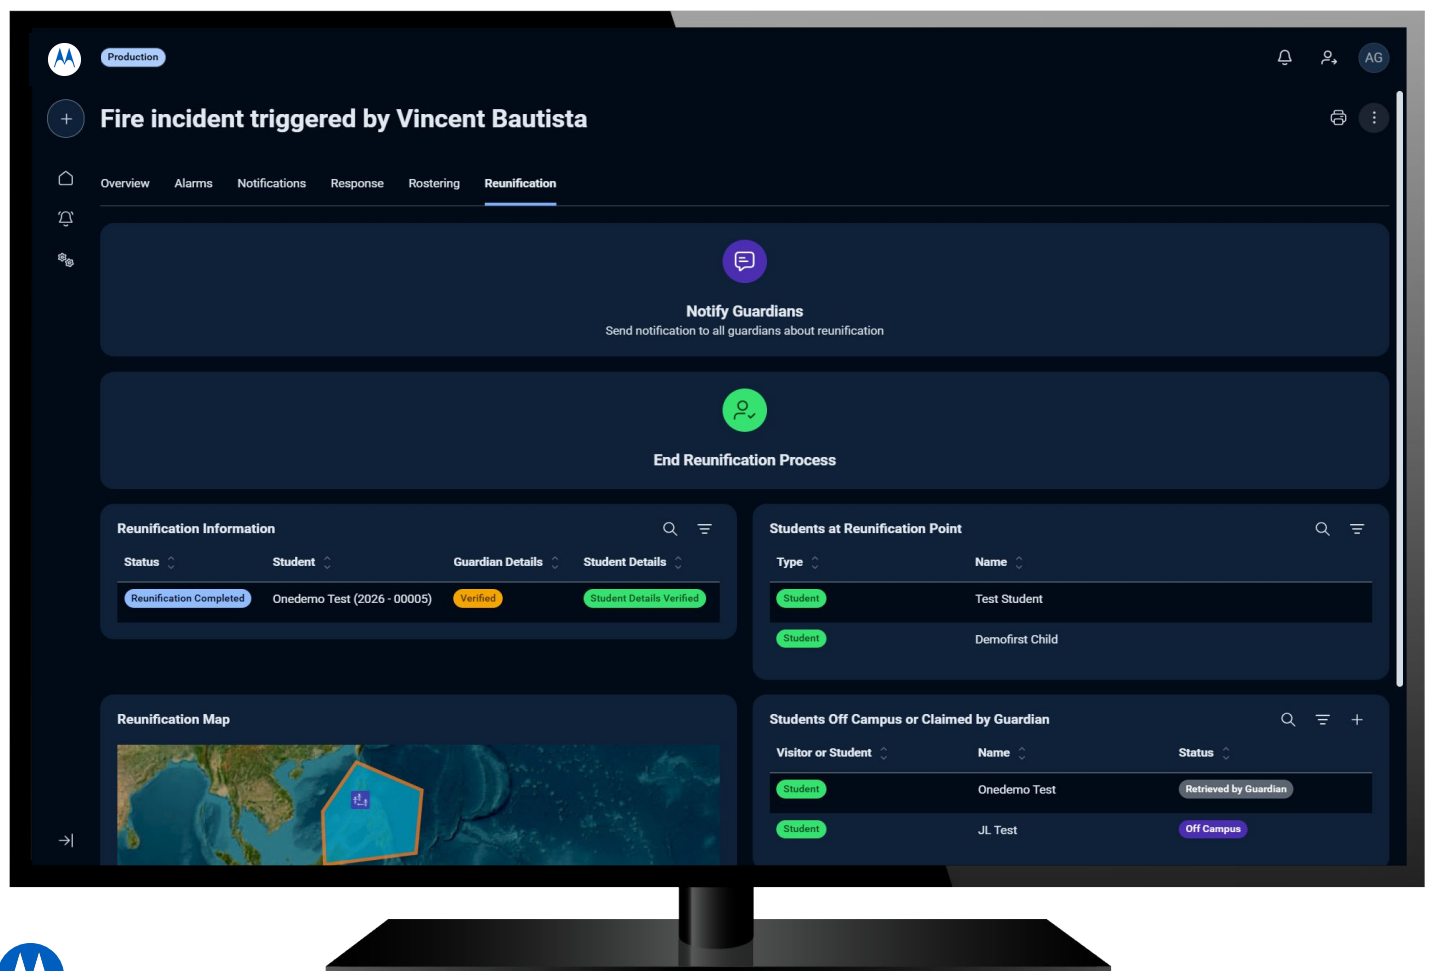

The journey home: Streamlined guardian reunification

Bringing calm to the most sensitive moments

A crisis is truly resolved only when every student is safely returned to their family. The process of matching anxious parents with their children is often the most chaotic and emotionally charged phase of school incident management. K-12 Resilience addresses this vulnerability with a dedicated, highly structured Guardian Reunification workflow that organizes what is traditionally a fragmented and stressful environment into a calm, documented transition.

Certainty for families and districts

By utilizing verified student accountability data, the reunification workflow helps school personnel know exactly which students are accounted for and ready for release before the transition process begins. Automated workflows guide staff through a multi-step verification process to confirm guardian identities and document the safe handoff of every child. This meticulous, integrated approach helps provide families with the one thing they need most during a crisis — certainty — while granting the district a permanent audit trail of a safe conclusion.

Safety that stays until the story ends

Complete protection across your entire campus

School safety demands an integrated technology solution that stays with your team from the very first call for help to the final, safe reunification. K-12 Resilience by Motorola Solutions closes the operational gaps that leave traditional safety models unfinished, protecting the path from "help" to "home". By bringing automated incident response, smart rostering and structured guardian workflows into a single dashboard, we empower your educators to lead confidently and keep your school community truly secure.
