

SmartEvidence

More context for stronger cases

Provide evidence teams more context to build stronger cases, delivering high-fidelity P25 radio audio and metadata directly into CommandCentral DEMS and correlating these audio recordings with body-worn camera videos.

The challenge

Records and evidence technicians face massive administrative workloads dedicating hours manually inputting metadata and searching through disparate systems to locate, tag, and synchronize radio logs with different audio quality with corresponding body-worn camera footage.

Additionally, critical context from conventional channels, off-network simplex communications and tactical edge talkgroups are frequently missed by traditional logging recorders, leaving gaps in incident reconstruction.

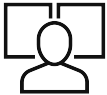

The solution

SmartEvidence alleviates this heavy administrative work from evidence technicians by enabling, high-fidelity, device-level audio recording and captures metadata directly from APX radios straight into CommandCentral DEMS. Unaffected by over-the-air degradation, it supports both LMR Trunking and Conventional channels.

Once configured, you can customize recording triggers to suit evidentiary managers specific operations through either continuous or event driven triggers. Event-driven recording can be activated by SVX video activation, emergency alerts, or Computer-Aided Dispatch incident assignments with up to 120 minutes of customizable pre- and post-event buffering to capture additional audio before and after an event.

SmartEvidence Benefits

Alleviate workload and streamline workflows

SmartEvidence automatically captures and routes audio and metadata from any radio channel (trunking or conventional) directly into CommandCentral DEMS. This alleviates the workload from Evidence technicians and ensures digital evidence is organized, searchable, and ready for review.

Clear audio and complete case context

Gain a clear view of every event with raw on-device audio, customizable pre and post event buffering, and comprehensive metadata like GPS tracking and radio stats. By automatically synchronizing this data with body-worn camera video in CommandCentral DEMS, investigators get more context needed to understand the full story.

Customizable agency compliance

Select recording triggers and upload pathways (WiFi or LTE), to meet your agency's specific policies and bandwidth needs. With flexible options for continuous or event driven recording, network uploads, and channel selection, you maintain complete control over your data.

TECHNICAL SPECIFICATIONS

Compatible hardware

APX NEXT/XE/XN
APX N70/XE
SVX video remote speaker microphone (optional)

Requirements

WiFi, 4G LTE, 5G
Radio firmware R.40.05.00
SmartLocate
CommandCentral DEMS

Note: SmartEvidence is not supported over LEO.
