

ENSURE SECURE PASSAGE WITH ENHANCED TRANSPORTATION SECURITY SOLUTIONS

The Transportation and Logistics industry is the backbone of the global supply chain. But as Transportation and Logistics companies work to ensure timely delivery, they also face a variety of security risks and challenges.

With no single person running from a shipment's origin to the final delivery destination, can your Transportation and Logistics company trust everyone along the supply chain? Is your cargo at risk of being stolen? Is the safety of your workers compromised?

Your enterprise must depend on your own resources to ensure the safety and security of workers and shippable goods. By investing in unified communications and enhanced perimeter security solutions, you'll be able take security further than you ever have before. Our solutions put the right data, in the right hands, at the right moment, and help security and staff work safer and smarter. Detect issues before they occur with intelligence driven systems and analytics, and keep deliveries on the road and out of the hands of thieves.

PROTECT PEOPLE AND SHIPMENTS ROUND THE CLOCK AND KEEP DELIVERIES ON SCHEDULE

CARGO THEFT IS HAPPENING 4X MORE FREQUENTLY

90% OF CARGO THEFT OCCURS DURING TRANSIT

100X MORE COSTLY TO REACT TO THEFT THAN TO INVEST IN PREVENTION

SECURITY SOLUTIONS

1 NATIONWIDE PUSH-TO-TALK COMMUNICATION

Communicate instantly, across the country, regardless of network or device. Bridge shipments from anywhere, without infrastructure set-up or maintenance with the **WAVE™ Two-Way Radio TLK100**.

KEY FEATURES

- Easy to Use and Manage
- Built for the Job
- Wi-Fi Connectivity
- Instant communication between computers, smartphones, tablets and radios
- Coverage you can count on

2 VIDEO SURVEILLANCE AND ACCESS CONTROL

Enhance perimeter protection and simplify monitoring with **Avigilon's** complete security solutions. Deliver exceptional safety and security with clear, high definition video coverage across large logistic sites.

KEY FEATURES

- Powerful Search
- Video Management Software and Analytics
- Efficient Bandwidth Management
- Centralized Monitoring
- Perimeter Protection and Secure Access

3 INCIDENT MANAGEMENT

Streamline the data intelligence and incident reporting of your workers with browser based, incident management software, **Ally**.

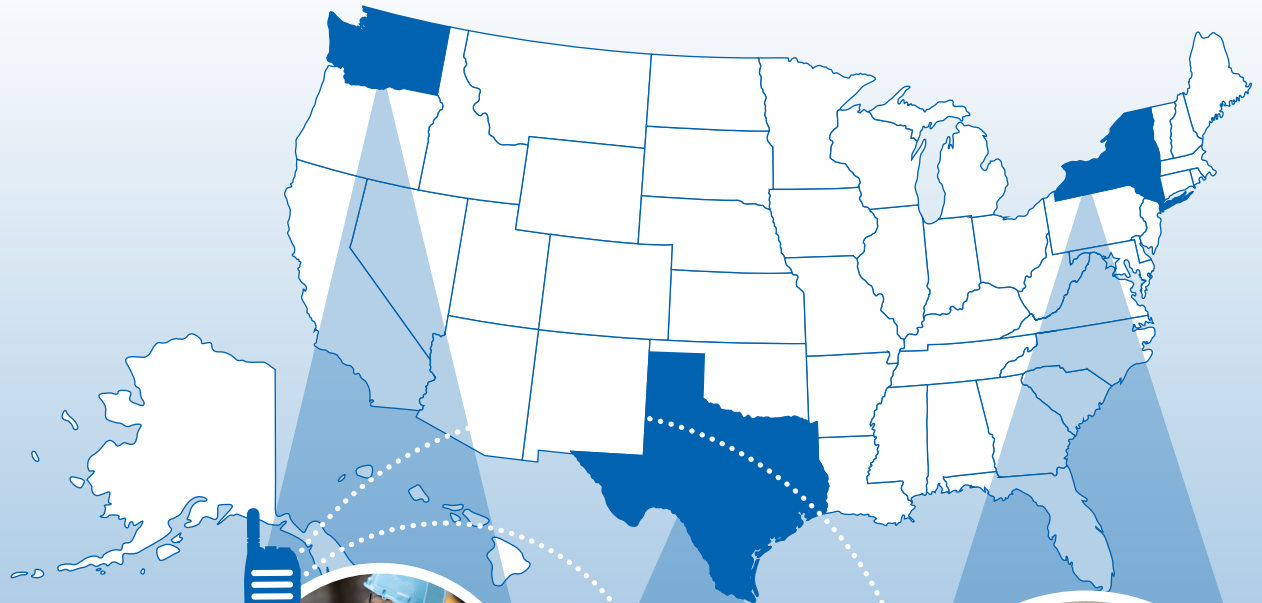

KEY FEATURES

- Cloud-based SaaS
- Incident Management
- Dispatch Technology
- Records Management
- Any size security team

NATIONWIDE PUSH-TO-TALK COMMUNICATION IN ACTION

A guard sees a suspicious person running away from the loading dock and PTT's for backup using his WAVE two-way radio. With nationwide push-to-talk, staff communicates with the driver who just left the warehouse and is enroute with the suspected tampered shipment. The driver communicates back to the guards using his WAVE two-way radio that the suspicious person did not steal or damage anything on his truck.

VIDEO SURVEILLANCE AND ACCESS CONTROL IN ACTION

A warehouse manager is notified that a shipment is missing and possibly stolen. Avigilon Control Center (ACC) video management software's powerful search features allow the manager to quickly and easily review recorded video. With a simplified screen layout and intuitive controls, the manager scrubs through compressed video within seconds across numerous cameras and sites. The team concludes the missing pallet was not stolen, but was left at one of the other warehouses. The pallet is instantly relocated to the proper shipping location and ships out on time.

INCIDENT MANAGEMENT IN ACTION

With Ally, a web-based, security incident management and dispatch software, all details of these events are logged, documented and time-stamped by both mobile users and security team members. Robust and easy to use tools allow for querying of records and the creation of reports.
